Get more from your CACI software with our annual advisory service (AAS) days

Obtain additional service and consultancy from CACI to support your ongoing use and development of our software

We firmly believe in establishing a long-term relationship with our customers in order that our team learns about how your team operates and what its needs are. Our children and young person's team at CACI is comprised of former practitioners – we speak your language.

Whist the fundamentals remain the same, improving outcomes for children in your services, the details can change with new regulations, targets, practices and personnel. Our AAS days are designed to give you peace of mind in receiving expert support from CACI in ironing out these details.

With AAS days agreed to in advance, you can react to change ahead of time with help from our team. These days are available at a cheaper rate than our normal day rate, whilst guaranteeing you access to resources when you need them.

AAS days support the ongoing running and evolution of your CACI software, ensuring expert help is there when you need it over and above any support issues.

Some of the services available through our AAS days include:

- Project management

- Software configuration

- Discovery sessions

- Change management

- Reporting and data analysis

- Training

- DBA and installation support

The benefits of CACI's AAS days:

Cost efficient

AAS fees are lower than the standard CACI consultancy or training day rates

Faster service

CACI resources can be deployed more rapidly than in the normal project-driven model

Up-front costs

You can budget in advance for services that will be required during the year ahead

Pre-approved expenditure

When a need arises, service days can be delivered without going through the process of obtaining approvals and securing budget

Flexible

You can purchase AAS days at any time and they are valid for 12 months, with the flexibility to add additional blocks of days during the year as required
