Taking route optimisation to the next level

Pin Routes is a next-generation route planning and optimisation solution that combines the power and flexibility of market-leading algorithms with a state-of-the-art user experience and best-of-breed logistics data, delivered to scale, from the cloud.

It's used by leading organisations that operate fleets of vehicles to plan and optimise routes for deliveries, collections and / or service jobs, across multiple sectors.

Pin Routes is equally effective in first, middle and final mile for dynamic routing, fixed routes or strategic planning.

With Pin Routes you can simplify the planning process, reduce your overall logistics operations costs by up to 25% annually, and decrease miles driven, in turn improving your carbon footprint.

Key features of Pin Routes

Results
Industry leading algorithms that lead to up to 25% reduction in miles, time and transportation costs.

Web
Fully hosted in the cloud, meaning:

- No additional server costs
- You're always on the latest version
- Easier collaboration with colleagues
- Multi-tenanted and highly secure
- You can log on to pinroutes.com from anywhere

Flexibility
Packed with advanced features to create viable and optimal routes in the most complex sectors, including:

- Collection and delivery pairs
- Soft time windows
- Virtual stops

UX
An expertly designed user experience makes it simpler to use, for users across all skill levels. Supports in cutting down planning time.
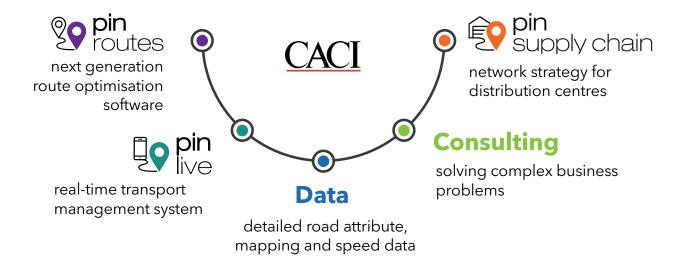

Scalability
Architected to scale in order to support some of the world's largest organisations, meaning even the biggest problems are no longer a problem.

Integration
Integrate using the API or file transfer. Out-of-the-box integration with CACI's transport management system, Pin Live for end-to-end route planning and execution.
